

ARIF RAHMATH MANZIL

Full-Stack Developer | Python/Django, React & Flutter

Kochi, Kerala, India | +91 9188346836 | arifrahmathmanzil@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full-stack developer who builds and ships complete products — from Django/DRF/FastAPI backends to React web apps and Flutter mobile apps. Experienced in owning the whole stack: designing PostgreSQL schemas, building REST APIs, and shipping polished front-ends that work for real users. Recently focused on training others in Python, AI/ML, and web fundamentals while delivering academic and client projects end-to-end, from initial design through deployment. Currently seeking full-stack or backend-focused roles building scalable, production-ready applications.

PROFESSIONAL EXPERIENCE

Python Django Developer

Aug 2025 – Mar 2026

KITES Software & Robotics Private Limited, Kochi

- Guided 35+ students through complete project lifecycles (planning, design, development, deployment) using Python and Django, delivering production-ready academic portfolio projects.
- Delivered hands-on training in Python, AI, and Machine Learning to student cohorts, translating core concepts into practical, project-based implementations.
- Led Web Design training covering HTML5, CSS3, and responsive design principles, helping students build user-friendly, mobile-responsive interfaces.

Flutter Development Intern

Jul 2025 – Nov 2025

Futura Labs, Kochi

- Completed an intensive Flutter and Dart training program focused on mobile UI development and cross-platform app architecture.
- Built responsive mobile interfaces using Flutter widgets, applying state management principles to handle dynamic UI updates.
- Gained hands-on experience across the full mobile development cycle — UI design, debugging, and deployment.

SKILLS

Languages: Python, JavaScript, Dart

Backend & Frameworks: Django, Django REST Framework, FastAPI, Bootstrap

Frontend & Mobile: React, Flutter, HTML, CSS

Database & Cloud: SQL, SQLite, PostgreSQL, Firebase, Supabase

Tools: Git

EDUCATION

Bachelor of Vocational Education, Software Development

Govt. College of Arts & Science, Kadmat, Lakshadweep • 2022 – 2025

PROJECTS

BeeBlog:

It is a blog portal where authors can write blogs based on topics and publish, it has a MS Word like text-editor, made with Django as backend and HTML, CSS and JS as front-end.

Bee Shop:

It is a grocery booking website to solve the problem of my islands grocery shortage and sellers being forced to dump the rotten grocery items. With mainly three users Admin, Seller and customer. Seller can register their shop and sell grocery, and customer can book and on approval from seller the customer can go and pick the items from the shop. It's fully made with Django as backend and HTML, CSS and JS as front-end. In future I would like to extend this project to flutter as a mobile application.
